

# Crystal Dispensing Closedown of Postmix Equipment

Disconnect boxes

Drain lines through into a bucket or sink. Do this by holding buttons down on guns

Run the water to clean inside if gun

Clean guns and connectors with hot soapy water. If possible, leave guns in water to stop any leaks. Water the gun is stored in needs to be changed every few days so it does not stagnate

Turn carbonators and machines off at the mains to stop icing

Turn off and disconnect gas cylinders and store in a safe place

To recommission your equipment please do all of this in reverse and insure you run the soda line for a couple of minutes to fill the system back up prior to use
